

Ti OLS – Cook's Distance

The scatter plot displays the relationship between Leverage (x-axis) and Cook's D (y-axis). The x-axis ranges from 0.00 to 0.04, and the y-axis ranges from 0.00 to 0.08. Most data points are clustered at low leverage and low Cook's D values. There are several points with high Cook's D values at low leverage, indicating potential outliers. A few points are scattered at higher leverage values.
